Non-members additional:	\$15	\$15
Banquet:	\$17	

Registered attendance at this meeting was 420+ !!!

Conference Banquet Friday night

**Banquet Keynote Speaker**

**Dr. Tom Webster** received his MS and PhD from the University of California at Davis, after which he conducted postdoctoral work on the effects of pesticides on honey bees pollinating alfalfa in California. He came to Kentucky State University in 1988 with responsibilities in apicultural research and extension. His research has been primarily on new approaches to nosema disease and to non-chemical control of varroa mites.

Much of his extension effort has been devoted to the creation and direction of Heartland Apicultural Society (HAS), which has held 3-day conferences every July since 2002. Also, projects to manufacture and distribute December 31, 2010 → →al pollination have been active since 2003. In addition, he has worked with beekeepers in Belize and Ecuador.

Dr. Webster co-authored the book Observation Hives with Dewey Caron and co-edited another Mites of the Honey Bee with Keith Delaplane.

**Weather**

Average Temps (March 2-3): high 61° F; low 37° F

Actual Temps (March 2, 2007): high 66° F; low 48° F
